IEC 320 OUTPUT OUTLETS

ECO Pro AVR CDS 19" 2U series UPS units provide protection against power drops and losses in the grid, consequently increasing the life and reliability of the connected equipment. The ECO PRO AVR CDS 19" 2U units were designed to protect **PCs**, **DTP stations** and **work stations**, **cash registers**, **CCTV** and **ICT equipment** from random, uncontrolled power losses.

FEATURES

- **AVR** is a system that regulates (**increases**) the mains voltage automatically, by adapting incorrect input voltage to a level that is acceptable to the receivers, without the use of the battery.
- The **USB HID** communication interface is compliant with HID Power Devices - the UPS can operate with other devices without the necessity to install software (the UPS is detected in the system as a battery).
- **Operating time prediction** - for determining the UPS autonomous operation (in back-up mode) in real time, through Powersoft**.**
- **Cold start** - for starting the device in battery mode, without connection to the mains.
- **3 x IEC 320 C13** outputs.
- **2 x PN-E-93201** outputs (Polish standard).
- **Sound / visual signal** (LED indicating UPS operating status).
- **Powersoft**, monitoring and management software - a free app for integrating UPS devices with operating systems.

The ECO Pro AVR CDS 19" 2U series is equipped with unique systems developed by EVER engineers:

- **CDS - Clear Digital Sinus** - system that enables the battery back-up to generate true sine wave output voltage in battery operation mode,
- **CBC - Cool Battery Charging** - quick and efficient charging system that cuts charging time and extends the operating life of the back-up's accumulators.

PROTECTION

- Overload
- Short circuit
- Surge

SERVICE

- Door-to-door support
- 3-year warranty for the UPS
- 2-year warranty for batteries
- Execution in 14 working days

Notes:

1) For standard operation, the load applied to the output must not exceed 80% of the value in the table. The power margin is necessary to ensure continuous work of the connected devices in the case of instantaneous surges of the load.
2) Constant exposure of the battery module to temperatures of +25°C reduces the battery life.
3) The permitted maximum load of the power supply unit decreases with the height above the sea level above the limit specified above.
4) The default configuration of the voltage range of the output (RMS): 195 ÷ 253 V AC. The value configurable from the software PowerSoft Professional
